### Milestone 2: Prototype

I decided on the name for application, "Yodel". Finalized features are as follows:

- User can see posts within 1 mile of their location
- User can create posts
- User can upvote/downvote posts
- User can comment on posts
- User can sort posts by new/hot
- User will see unique posts depending on location

UPDATED:

- App will now be music player using Firebase Authentication
- Users can listen to local music
- Users can see list of all their local music

- User will have “player” that play/pause/skip/go back songs
- HOPEFUL - Use firebase to store music and stream music instead of local listening
